## UPGRADING FROM SAGE LINE 50

The Sage Line 50 accounting package is a favourite among small businesses, but an expanding organisation such as yours is almost certain to outgrow the software's capabilities and capacity before long.

Typical problems that you may have experienced are the inability to allow more than ten users, insufficient order processing functionality, and slow performance when handling large volumes of data.

Perhaps you've also been frustrated by the restricted nominal structure, limited reporting functions, and the need to lock everyone else out of the system while processing the company's VAT return.

Wouldn't you prefer a more integrated business system that includes provision for accounts, manufacturing and customer relationship management within a single interface?

## Migrating to Microsoft® Dynamics™ NAV®

Fortunately, there is a simple answer: you can now migrate safely from Sage Line 50 to Microsoft Dynamics NAV. Formerly known as Navision, Dynamics NAV provides you with the reassurance of complete scalability. No more changing system every three to five years – you can start with just one user and expand to a virtually unlimited number as your business grows.

The all-in-one system assimilates your accounts, your manufacturing system and your CRM functions into one package, and will also integrate with other Microsoft products such as SharePoint®.

The advantages are numerous: probably the first thing you'll notice is that Dynamics NAV is extremely fast! Then you have true period accounting, the provision for multiple currencies per customer/vendor, the ability to handle multi-location stock and serial numbers... and too many other benefits to list here.

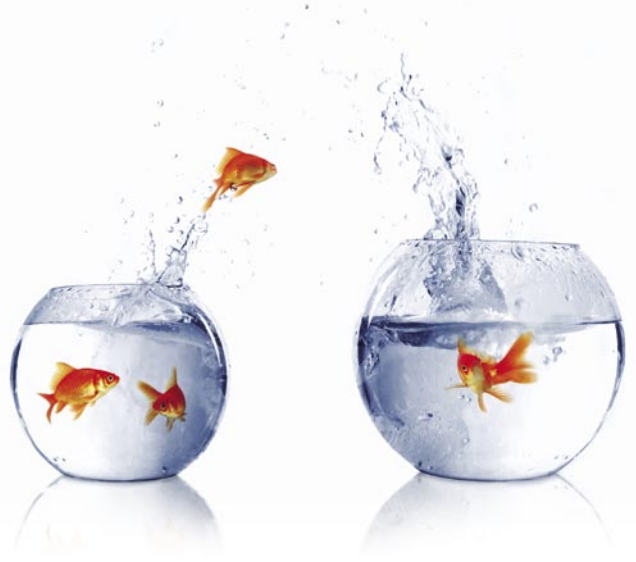

Add to all this the fact that Dynamics NAV is an ultra-modern platform that allows rapid development, and you can be assured that it's future-proofed to serve you for many years to come.

JUST-MIGRATE TO BENEFIT?

## Just-Migrate to Benefit?

Your need to upgrade may already be imminent, but you're also understandably cautious when it comes to taking the plunge. By now, your company owns substantial quantities of valuable data – vital management information that you need to make crucial business decisions – and you may fear that access to these data may be impaired by the changeover, or even worse, the data could be lost forever.

That's why we've developed the **Just-Migrate** business process. Based on our own proven, well-developed software, **Just-Migrate** allows Creative to upgrade your Sage Line 50 system to a Microsoft Dynamics NAV™ business solution efficiently, cost-effectively, and – most importantly of all – with complete safeguarding of your data and 100 percent transfer accuracy.

No re-keying of data is required, eliminating the possibility of errors or omissions, and a full audit trail keeps all data and transactional history on the nominal ledger. Your original Sage structure is retained, so the new system has the same look and feel to give you instant familiarity without the need for extensive re-training.

**Just-Migrate** works with every Sage Line 50 package from Version 4 to Version 2007, and imports the following data into Microsoft Dynamics NAV:

Nominal structure (with the option of re-coding this if desired), departments, budgets, full audit trail history, bank accounts, customer accounts, supplies accounts, opening customer balances and supplier balances in detail, and full cashbook history with un-presented items.

### Peace of Mind

Rapid set-up, reduced costs, minimal downtime to reduce impact on your business, and the peace of mind that totally safe and accurate data transfer provides: Creative's Just-Migrate is the best solution to gaining the full benefits that Microsoft Dynamics NAV offers, in the shortest time.

### The Next Step

We'll be pleased to address your specific needs and answer any questions you may have about upgrading from Sage Line 50 to Microsoft Dynamics NAV; **simply complete the enclosed response card or call Simon or Matthew on 01628 660600 for an informal discussion, without any obligation.**

*"The Creative data conversion from Sage Line 50 to our new Microsoft Dynamics NAV system was fast, accurate and enabled a seamless transition. Most importantly, it gave us total peace of mind that we retained a full audit trail. A bonus of the changeover was having the opportunity to implement a new nominal structure at the same time."*
